

ABSTRACT OF THE DISCLOSURE

A walk-behind tiller having a loop-shaped handle is provided. An operating portion of a rear portion of the handle includes left and right horizontal grips, left and right rising portions and a cross portion interposed
5 between the rear ends of the rising portions. For holding the tiller substantially horizontally, the left and right horizontal portions are held. For tilling operations, the left and right rising portions are held. For pushing down the handle, the cross portion is held.
